

Kodu Getting Started

Getting Started

Open the Kodu Game Lab and select 'Load World' from the main menu.

From the buttons at the top, select 'Lessons'.

Use the left and right arrows on either side of the screen to scroll through the different built-in worlds.

Some are tutorials that will give you instructions on what to do. Others will allow you to play a game and view or edit the code too.

Playing and Editing a World

When a world has loaded, you can click the Play button to try it out. At any time, press the <Esc> key to toggle between the play and edit modes. To view or edit the code for a character, click on the Object Tool button then right-click on the character in the world and choose Program.

If you have loaded a tutorial, there will be instructions to follow at the top of the screen that will help you learn some of the basic coding for Kodu.

At any time, click the Home button to go back to the home menu and load a different world. You do not need to save any changes.
